

### Multiple Mullion Configurations

Sheerwall CW90 features multiple mullion configurations ensuring the system is correctly specified for almost any conditions. High Windload capability and therefore suitable for high-rise applications.

Panels located on mullions with locating angles to prevent vertical load transfers

Spigots ensure accurate location of panels and ensures optimum rigidity

### Weathering

All panels are located against Santoprene bulb seals to ensure maximum insulation against water infiltration, air thermal and noise.

### Aesthetics

No visible exterior mullion or transome details
